

*The drive which
thinks of everything ...!*

*Tubular drive with
electronic limit switches
for the automation
of your roller shutters*

BECKER
It's that easy.

This drive has eyes everywhere!

BECKER
It's that easy.

Life is full of little surprises. If only it was possible to have your eyes everywhere. But actually you don't need to. You can now concentrate on the more important things in your life thanks to the obstacle detection integrated in your roller shutter drives. It stops the roller shutter as soon as the curtain comes into contact with an obstacle. Whether it is a flowerpot or a child's tricycle – everything is safe, and you can sit back and relax. Some of life's unpleasant surprises can simply be avoided.

The advantages of drives with electronic limit switches:

- **Jam detection**
(in UP direction)
- **Obstacle detection**
(in DOWN direction)
- **Anti-lifting device (optional)**
(for RP+ drive types)
- **Can be installed in all common roller shutter sizes**
- **Silent operation**
- **Overheating protection**
To prevent damage to the motor and curtain, a temperature monitor switches off the drive when overheating occurs due to an increased load
- **Parallel connection**
Several drives can be easily connected in parallel
- **Anti-freeze protection at the top**
- **Automatic curtain length adjustment**

Mighty impressive due to its intelligence and sensitivity: The drives with electronic limit switches from Becker-Antriebe.

Jam detection/Anti-freeze protection

The electronic limit switches of your roller shutter motor recognize when the roller shutter is frozen to the window sill and stop the motor to avoid excessive forces which could damage the roller shutter and the motor.

Obstacle detection

If the automatic function detects an obstacle, it stops downward movement of the roller shutter.

Anti-lifting device

And if a burglar attempts to enter your home, he will be stopped by the ingenious combination of anti-lifting device and roller shutter drive. This is an optional feature included in the premium tubular drive equipment. Consider the numerous interesting features when choosing your drive – ask your authorized dealer for more details!

Energy savings

Clever timing can help to cut your heating bills. The best tip: Save energy by closing your roller shutters as soon as it gets dark.

Simple and convenient control of tubular drives via the Centronic control range from Becker-Antriebe. Please ask your authorized dealer for more details!

Options:

Buttons and individual controls

Timers

Radio-controlled receiver

Transmitter (in combination with a Centronic radio-controlled receiver)
